### **Modern Gadgets in Writing**

In contemporary times, technology has impacted the human race to unimaginable extents. It has facilitated and promoted our innovative capacity in aiding the way we conduct our daily activities. Moreover, through enhanced creativity, it has led to the introduction of gadgets that seek to improve our educational systems. Particularly, new and better devices continue to be created with the mission of improving writing skills and changing the writing environment for the better.

The introduction of modern devices has influenced the writing environment in the sense that it has become more fun and less tedious. Traditionally, writers have had to carry with them heavy old laptops, but with the ultrabooks, the drag will be no more. A modern gadget such as the ultrabook enhances the writer's skills by keeping power for long in addition to their lightweight. Subsequently, low consumption of power translates into more battery time for writing with less worry. Furthermore, some of the gadgets are made of illuminated keyboards that make it possible for the writer to write even in dark places (Ramey). In the same light, unlike

the traditional membrane made keys, modern gadgets are made of mechanical switches. For instance, the introduction of the Steelseries series 7G keyboard comes in handy for any writer wishing to improve his/her skills. Subsequently, there is increased tactile response over and above the response time. Additionally, the gadget comes with audio and USB ports which are among the common necessities for any writer (Iyogi). Besides, despite being in a tech savvy generation of writers, one still needs a decent and affordable scribbler. Apparently, it is common in writing for one to suffer from repetitive strains and cramps. For instance, modern gadgets such as the ergonomic Yoropen and the Fisher Space pen come in handy to solve this problem among writers. Additionally, some of the modern pens are enabled for the gel-ink refill (Beschizza).

In addition to creating a favorable writing atmosphere, modern gadgets have been of utmost importance to the writing fraternity as they have helped improve the quality of the texts being written. Exemplary writing is characterized by good organization of the plot, dialog, character development, and story structure. In response, creative writing software has been designed to assist in writing. This will result in the publication of captivating and original stories in the local and international dailies. Indeed, writing will be well organized and possess appropriate style while at the same time adhering to the writing rules (Iyogi). Similarly, the introduction of modern gadgets has enhanced writers in sharing their works. Through the introduction of the Internet, it is easier for one to share his writing with a bigger and varied audience and receive feedback. In the same light, one receives positive criticism from other experienced writers and consequently uses the comments to improve and develop his skills (Beschizza). Also, a serene and silent location is among the core requirements for writers to produce quality works. A writer's greatest enemy will always be noise. In the modern times, gadgets have been introduced that seek to put off certain sounds that may be a nuisance to the

writer. Notably, the noise-cancellation cans are designed to provide an oasis of silence for the writer regardless of the location. Subsequently, with this gadget, an author's creativity goes a notch higher (Ramey).

In conclusion, modern gadgets have revolutionized the writing community. They have introduced numerous improvements to the writers' routines by minimizing hand strains and enabling work during long hours of power blackout. Besides, they are designed to correct common human errors by sharpening the writer's expertise. Indeed, modern gadgets will continue to improve and polish writing experiences.
