The History of Writing in the USA

Writing for the humankind is the most significant development that led to the improvement of the wisdom that existed before. The complex way of writing started in the ancient times and the current knowledge about writing is an ongoing advancement through which man continues to learn and adopt all the techniques that will help improve their way of life as well as the writing industry (Murphy 17). The writing invention was through developments and interest that the people from the USA had to pass messages as well as represent the information they had in other formats.

Prior to writing, people used images or the pictures to pass their messages while others made use of the conventional signs to communicate with others. After the conventional sign in passing messages, the USA locals further advanced to phonetic writing whose basis were the rebus and later went to the syllabic writing to communicate (Elliot 78). This had lasted for a longer time before the intellectual mind of the human developed to the current alphabetic writing currently used by people globally. Other forms included the use of stones and clay tokens to draw shapes of different things like animals before they communicated with others. The cuneiform writing also took the form of composed signs that looked like small wedges to the specific objects (O'Neill 23).

There is no specific origin of the writing profession since different parts of the world had interests in the way they could develop a specific way to communicate. However, most scholars claim that the Egyptians and the Sumerians were among the first to write in the period between 3500-3300 BC. Their knowledge of different areas like agriculture and industrialization were the main contributors to their technical know-how in writing. It is thought that the initial way through which they taxed their subjects and kept the records necessitated the need for permanent records and writing developed as the main backbone of the same (Elliot 90). Writing became the breakthrough for other technical developments and innovations of the early man like the construction of major cities and invention of the wheel for transport.

In the recent past, teachers were the main contact through which people learn how to write as people get the exposure to education at a young age. The desire to learn from the ancient times has made the art of expression and the element of communication become an easy task (Murphy 24). This, in turn, leads to mature and reasonable communication and developments of other factors and areas that the humankind depends on to survive. It is worth noting that the knowledge in writing is the major foundation of the relationships that exist in the world.

Modern scholars and educationalist in the USA appreciate the great trend and innovation in writing. The long journey through which the art of writing has gone through is testimony that there are more inventions that will happen in the future. Writing has become an art easy to learn which starts at a young age and the humankind use their intellectual capacity and their brain and have diversified methods through which they can preserve their writings. It is within the reach of every individual to read and learn how to write as the more practice a person has towards the art, the better they become (O'Neill 43). Writing is a global issue and not

reserved for the superior countries unlike in the past where only the elite in the society and in the world could read and write.
